Problem Statement

Our country's healthcare and emergency services system is something that needs improving. Whenever someone has to go to the hospital they have to fill out multiple sheets of information, and then wait hours to even see a doctor. This not only puts people's health at risk, but it also creates agitation in the emergency room which is the last place it's needed. Our plan is to create an app to allow people to check in and fill out all necessary paperwork, so that once they arrive at the hospital they can go straight to the back and/or reduce their waiting time significantly.

Who is experiencing the problem?

This problem is being felt by all Americans who need to take a trip to the hospital for many different reasons.

What is the problem?

The presented problem is that the wait times in hospitals are extremely too long and can become exhausting.

Where does the problem present itself?

The problem presents itself at hospitals around the country.

Why does it matter?

Our problem matters because the health and treatment of American citizens should be one of the top priorities of our government and health officials. As currently constructed citizens don't feel as if they're being treated as a priority, so this is one way we think it can be helped/fixed.
